

Fire & Life Safety Systems Oversight

OUR APPROACH

The proper design and installation of fire protection and other life safety systems is the first step in protecting lives and property. AFG offers a wide range of CM and inspection services by licensed professional engineers (PEs) and certified construction managers (CCMs) to meet our clients' needs.

For 30 years, AFG has overseen fire and life safety system improvements, often as an integral part of our overall CM services. This experience extends to a wide variety of building types to include historic properties, courthouses, laboratories, schools, federal and municipal offices. Our qualified team ensures that sprinklers, alarm systems, and other suppression systems and devices are functioning properly and meet code requirements during every construction phase.

Why This Works

- On-site personnel ensure your facility meets all NFPA, NPPA and OSHA codes & standards
- Inspection reports, deficiencies and updates are provided regularly throughout the project
- AFG develops strong relationships with key stakeholders to coordinate shutdowns & tests
